Vadim Liventsev

Head of AI · Machine Learning Scientist & Engineer

AI research and engineering across program synthesis, agentic coding, machine learning for health, and tools for structured and 3D data.

SELECTED AI & SOFTWARE WORK

Public links open the corresponding paper, code, or product.

WHEN / WHERE	WHAT I BUILT	PUBLIC ARTIFACTS
2025—2026 **Ideatura**	• An LLM coding harness for manipulating 3D models.	ideatura.ai ↗
2024—2025 **Philips Research**	• A medical-device support-ticket classifier identifying common defect types.	Private work
	• A retrieval-based slide-deck generator for employee training.	Private work
2019—2024 **TU/e × Philips Research**	• Multi-agent coding frameworks combining LLMs with genetic-programming principles.	SEIDR paper ↗ Code ↗
	• Structural language models for source code.	Tree VAE ↗ Code ↗
	• Reinforcement-learning environments for healthcare, spanning vision and structured data.	Paper ↗ HeartPole ↗ Auto-ALS ↗
	• Reinforcement learning from code-execution feedback.	BF++ paper ↗ Cibi code ↗
2019 **RedKangaroo**	• A clinical-data exchange platform for syncing health data between providers.	Archived / private
2017—2019 **Skoltech × Philips Research**	• A system for mining tabular data from clinical notes.	Deep Text Prior ↗ Active learning ↗
2017 **BotEngine**	• A web app for building chatbots with rules and flowcharts.	No public release
2013—2017 **HSE × ISPRAS**	• A language-agnostic code-completion system.	No public release
2009—2013 **LIT**	• Swarm-robotics algorithms for exploring a location.	No public release
